

Material & Form

SHARING BOX

the sustainable parcel system

Mechanical Unit

For transport within the station

Hand Grip

Easy to carry

Unique Folding

All edges are completely sealed by simply closing the clip

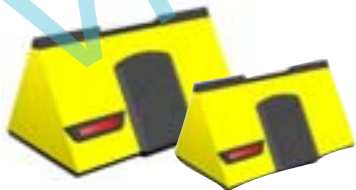

Challenge for the Material

Main material is a cheap but high performance plastic. The edges are made out of a special squeezable and strong plastic that stays in form

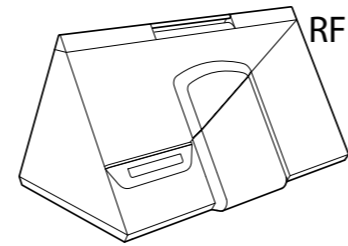

Easy Storage

Minimal volume when not in use

Different sizes possible

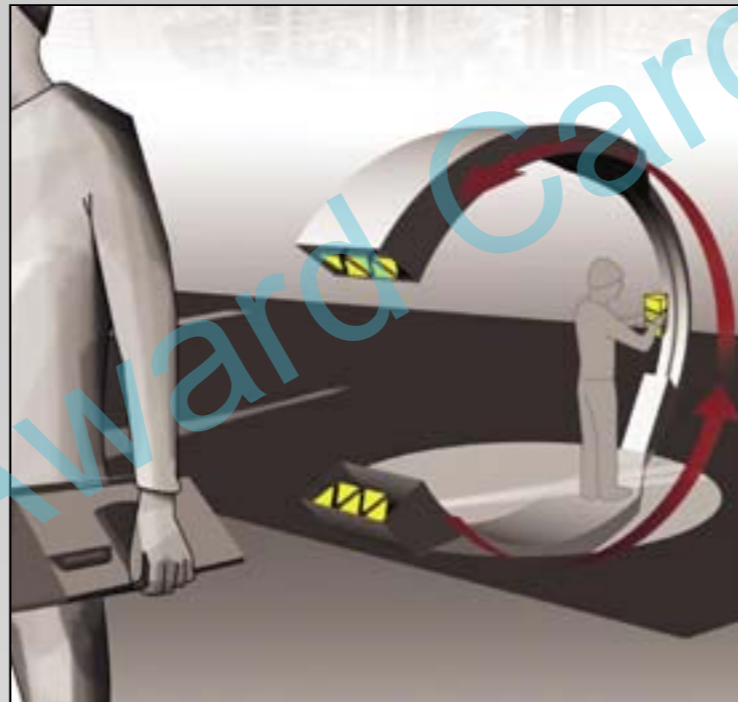

The triangular shape is efficient in space and storage

1. Payment & Receiver Information

Send the Receiver Information via mobile to the RFID chip inside. The delivery is automatically paid via mobile

2. Send & Receiving Station

Send your mail

Put it in the docking station. It slides up to be stored safely until the station is emptied (3x daily)

Your Mailbox

Receive your daily mail at the station near your house. Get informed where and what is waiting for you. You will be automatically identified by your RFID signal. Your mail slides out of the storage in the ground !

The sent parcels are easy to collect. The new mail storage in mailbox is safe & easy...

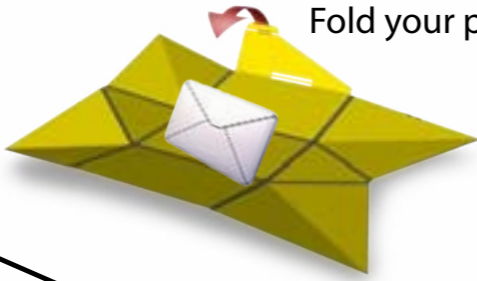

...And it's fun to use the parcel & the station !

SHARING BOX
the sustainable parcel system

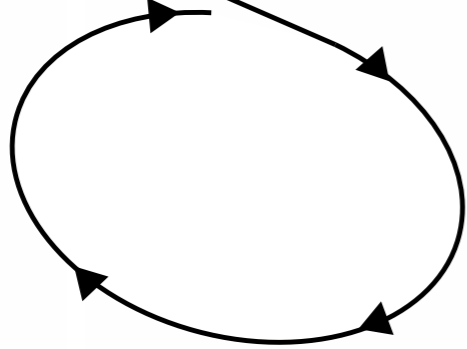

Buy new packages

Fold your parcel!

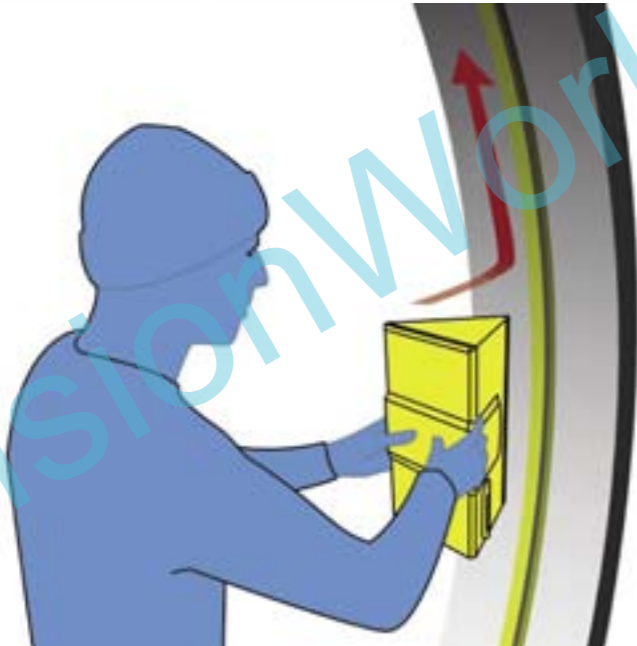

Re-use the parcel
or get money for it
